DIGITAL LITERACY PROJECT REPORT

Title Page

Name: Shashwat
Registration Number: 25BAI10705
Branch: B.Tech CSE
Year: First Year
Course Code: CSE0001
Course Title: Digital Literacy
Date: 31-03-2026

Introduction

Digital literacy is an essential skill in today's technology-driven world. As a Student Digital Ambassador, my role is to guide peers in using digital tools effectively, safely, and professionally. This project focuses on building a Digital Literacy Portfolio through five structured tasks, each representing a core module of the course.

The tasks include creating an awareness infographic, building a digital portfolio, exploring online platforms, understanding email etiquette, and studying cybercrime awareness. Through this project, I gained hands-on experience with tools like Canva, GitHub, LinkedIn, and Google Forms.

This report documents my work, observations, and learnings from each task, highlighting how digital literacy is important for academic and professional success.

Task 1: Digital Literacy Awareness Infographic

For this task, I used Canva to create a one-page infographic on digital literacy. The design included key topics such as the meaning of digital literacy, safe internet practices, and useful digital tools for students. I used icons, minimal text, and structured sections to make the infographic visually appealing and easy to understand.

The infographic explains how digital literacy helps students communicate effectively, protect their data, and build a professional online presence. It also highlights tools like email, cloud storage, and collaboration platforms.

One challenge I faced was selecting the right layout and balancing text with visuals. However, it was interesting to explore different design templates and customize them creatively. This task improved my understanding of visual communication and how to present information clearly.

Task 2: Student Digital Portfolio

In this task, I created and updated profiles on GitHub, LinkedIn, and Kaggle.

GitHub is used for hosting coding projects and showcasing technical skills. I created a profile README that includes my name, branch, and learning goals. LinkedIn is used for professional networking, where I added my education details and connected with peers. Kaggle is a platform for data science and machine learning practice.

Over the next four years, I plan to use GitHub to upload projects, LinkedIn to build a professional network, and Kaggle to enhance my analytical skills. This task helped me understand the importance of maintaining a professional online presence from the early stages of my career.

Task 3: Coding & Collaboration Platforms

For the coding practice part, I used HackerRank and completed a beginner-level problem. It helped me understand basic problem-solving and coding logic.

For collaboration, I created a quiz using Google Forms with five questions related to digital literacy. The form included both multiple-choice and short-answer questions. I also viewed responses in Google Sheets, which demonstrated how data can be collected and analyzed.

These tools are highly useful academically. Coding platforms improve problem-solving skills, while collaboration tools help in surveys, feedback collection, and group work. This task enhanced my practical exposure to digital tools used in real-world scenarios.

Task 4: Email Etiquette & Communication

Poor digital communication can create serious misunderstandings. For example, if a student sends an email without a subject line or proper greeting, the professor may ignore it or misunderstand the request. Similarly, informal language in professional emails can create a negative impression.

To avoid such issues, emails must be clear, concise, and properly structured with a subject, greeting, body, and sign-off. Maintaining a respectful tone is very important.

This task helped me understand how professional communication works and why email etiquette is essential in academic and corporate environments.

Task 5: Cybercrime Awareness

While researching cybercrime, I learned about phishing and online payment fraud, which are very common among students. I was surprised to see how easily people can be tricked into sharing sensitive information through fake emails or links.

One key realization was that even a small mistake, like clicking an unknown link, can lead to serious consequences such as financial loss or data theft.

As a result, one habit I will change is being more cautious while clicking links and always verifying sources before sharing personal information. This task increased my awareness of online safety and responsible internet usage.

Conclusion

This project provided valuable insights into digital literacy and its importance in everyday life. From creating visual content to building a professional portfolio and understanding cyber safety, each task contributed to my overall learning.

I developed practical skills in communication, online collaboration, and digital awareness. These skills will not only help me academically but also prepare me for future professional opportunities. Overall, this project successfully enhanced my confidence in navigating the digital world responsibly.
